

UNIVERSIDAD DE LA ISLA DE LA JUVENTUD «JESÚS MONTANÉ OROPESA»

LA AGENDA 2030, FIDEL Y LA ENSEÑANZA-APRENDIZAJE DE MARXISMO-LENINISMO

Autores

Dr. C. José Rolando Vázquez Labrada. Profesor Titular.

Dr. C. Magdalena Moreno Martínez Profesora Titular.

Lic. Keily Alicia Ramos Moreno. Profesora

Stage 1: 100% of the population is infected

Endemic

Stage 2

Stage 3

Stage 4: 100% of the population is infected

Stage 5

Stage 6

Stage 7

Stage 8: 100% of the population is infected

Stage 9

Stage 10: 100% of the population is infected

Stage 11: 100% of the population is infected

Introduction

- The first part of the course will focus on the basic concepts of quantum mechanics, including wave functions, operators, and the Schrödinger equation.
- We will then move on to more advanced topics, such as the Heisenberg uncertainty principle, the Pauli exclusion principle, and the Dirac equation.
- The second part of the course will cover the applications of quantum mechanics to various fields, including quantum chemistry, quantum optics, and quantum computing.
- Finally, we will discuss the philosophical implications of quantum mechanics and the role of the observer in the measurement process.

1. **Introduction**

2. **Background**

3. **Methodology**

4. **Results and Discussion**
